

DESIGN-BUILD DELIVERY

What is Design-Build? Design-build (D-B) is a type of project delivery that allows a single contractor to perform both the design and construction of a project at the same time to ultimately deliver the project faster and more efficiently.

What is Design-Build-to-a-Budget? Design-build-to-a-budget is a method that puts a cap on the maximum amount of funds available to the contractors bidding to win the contract to build a project. Contractors are scored on how much they can build for the dollars available. This method encourages innovation and motivates contractors to provide high quality, time savings and additional improvements while delivering all project goals and requirements.

Why is this important to I-30? I-30 corridor improvements will ultimately be delivered in the D-B method of development.
